- Relative motion between the magnetic field and conductors induces an emf (electromotive force) in the conductors.

- When connected to a load, current flows, producing torque or power transfer depending on the machine's mode.

Electromagnetic Induction in Action

The process can be summarized as:

- Magnetic Flux Generation: Field windings or magnets produce a magnetic flux.
- Rotation of Conductors: The armature conductors rotate within the magnetic flux.
- Induced emf: According to Faraday's Law, a voltage is induced proportional to the rate of change of flux.
